Data Source: U.S. Census Bureau, American Community Survey. Data query from the American FactFinder: Tables S1810 and C18131 accessed 8-1-13 from <http://factfinder2.census.gov/faces/nav/jsf/pages/index.xhtml>.

All percentages are weighted to be more representative of the population of Maine and to adjust for non-response. Subgroup counts might not sum to Maine total due to missing data. N: Estimated number of Maine adults with a disability. NA = Not Available.

[†] Ratio of income to the federal poverty level in the past 12 months; reported only for the population for whom poverty status was determined.

* Among the noninstitutionalized civilian population. The survey includes questions about six types of difficulty: hearing, vision, cognitive, ambulatory, self-care, and independent living. "Disability status is determined from the answers from these six types of difficulty. For children under 5 years old, hearing and vision difficulty are used to determine disability status. For children between the ages of 5 and 14, disability status is determined from hearing, vision, cognitive, ambulatory, and self-care difficulties. For people aged 15 years and older, they are considered to have a disability if they have difficulty with any one of the six difficulty types."
